SUMMARY

The article considered in the problem of implementation the method of collection, analysis and assessment process of safety information or lack of expected efficacy for veterinary medicinal products at the stage of post-marketing monitoring of possible unexpected adverse reactions that may occur in animals, personal or environmental problems and have influence on the animal origin products quality that occurs after any use of veterinary medicinal products in veterinary medicine practice.

Were suggested the structural components of template (document, reporting card) for veterinary medicine professionals responsible for the reporting regulatory authorities on adverse events occurred during post-marketing period of any veterinary medicinal products exposure.

A "Map-report about a by-reaction and/or absence of efficiency of veterinary medicinal preparation" contains necessary for an estimation and analysis given about the educed undesirable influences of veterinary medicinal preparations on the organism of animals, people or environment and can be used for a rapid exchange by information between the producers of veterinary preparations (by the proprietors of registration certifications) and establishments of veterinary medicine, in that the marked preparations are used in clinical practice.

Information of the revealed adverse events, related to lack of expected efficacy according to approved labeling or suspected or unexpected reactions in animals, or noxious humans reactions after being exposed to veterinary medicinal product, or potential environmental problems, arising from the use of veterinary medicinal products, or quality of consumption products of animal origin obtained from treated animals is very important for regulatory decisions for future veterinary medicinal products usage in veterinary clinical practice.
